

Dessinée par Magnus Long, Lagoa est une chaise empilable pour les cafés, les restaurants, et la maison. Ses formes sont inspirées par Rio de Janeiro. Son nom est emprunté de l'un de ses quartier : le Lagon. Les lignes fluides de l'assise et du dossier se combinent avec la structure légère en acier pour créer une silhouette simple et élégante, le dossier semblant flotter sur le sommet du triangle arrière, évasé et biseauté.

Designed by Magnus Long, Lagoa is a low-stacking dining chair for cafés, restaurants and domestic interiors. Its form is inspired by the liquid lines of Rio de Janeiro and takes its name from the Lagoa (lagoon) district of the city. The fluid forms of the polished plywood parts are combined with a light steel structure to create a clean silhouette, with the backrest seemingly floating on the apex of a triangular frame with flared, cut-off.

Lamellé-collé de hêtre plaqué
Veneered Beech plywood

Finishings : refer to price list

M3.1 - BLACK

acier carbone peinture epoxy
powder coated carbon steel

MÉTAL / METAL

B1.2 - OAK

placage chêne huilé
oiled oak veneer

B2.2 - WALNUT

placage noyer vernis
varnished walnut veneer

B1.3 - BLACK STAINED OAK

placage chêne vernis
varnished oak veneer

BOIS / WOOD

METAL

The high quality steels used by Objekto are produced by very carefully selected French or Italian steel manufacturers.

Stainless steel

Stainless steel is highly resistant to corrosion, but like other steel types, it is not immune from the effects of oxidation under extreme conditions. Stainless steel must be kept clean and free from contaminants to achieve maximum corrosion resistance and aesthetic appeal.

Care

- Clean by using a soft cloth
- Never use cleaning abrasives, steel wool or polish
- Do not use chlorine based liquids on the steel as this will cause the steel to rust
- Keep the material dry

Phosphated carbon steel

Carbon steel is the original raw material used in 1957 for manufacturing the first Paulistano armchair. The carbon steel frame is phosphated. The phosphating process is a surface treatment done in order to stop the first main oxidation. Nevertheless, this frame will oxidize slowly with time, according to modernist precepts.

Care

- Clean by using a soft cloth
 - Never use cleaning abrasives, steel wool or polish
 - Do not use chlorine based liquids on the steel as this will cause the steel to rust
 - Keep the material dry
 - To avoid natural oxidation, clean the steel using a soft cloth impregnated with a special oil for steel (we recommend using WD40™ oil)
- Once done, polish up by using a dry and clean cloth

Powder coated steel

Care

- Clean by using a soft cloth
- Never use cleaning abrasives, steel wool or polish
- Do not use chlorine based liquids

LEATHER

Our leather is vegetable tanned, semi-aniline or aniline. Its raw and natural surface allows the leather to breathe and offers excellent sitting comfort. The leather is full grain, which means that its natural surface structure has been preserved and all natural markings are visible. Natural markings are the hallmarks of the animal's active life and give the piece of furniture a unique sense of character.

Care

- Do not expose to direct sunlight
- Clean by using a soft cloth
- Do not use detergents, chemicals or fats

CANVAS

The canvas used to manufacture our covers are 100% cotton. It is rotproof, waterproof and stainproof for both indoor and outdoor use.

Care

- Clean with a soft brush to remove dust
- Before washing the cover refer to the instructions on the label sewed inside it

WOOD

Woods originate from European sustainable forests.

Care

- Clean with a soft cloth to remove dust

MARBLE

Marble is a beautiful but delicate and porous stone. To prevent ring marks, use coasters under glasses etc. Always clean up spills immediately.

Care

- Dust the surface on a regular basis and wash the marble when needed with a cloth dampened with warm water
- Never use dusting sprays or abrasive cleaners on your marble
- To refresh the stone and protect it, we recommend marble polish
